1. The drawings filed on 1/16/03 have been accepted.
2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11-107,112, (Machine translation attached).

JP 11-107,112 discloses a woven fiber glass sheet which is suitable for use in laminating processes in forming circuit boards. JP 11-107, 112 differs from the claimed invention because it does not teach that the spaces between the fibers of the sheet should be less than or equal to the diameter of a wire positioned on the surface of the sheet. However, JP 11-107,112 does teach optimizing the weave density of the fiber glass cloth in order to increase the accuracy and efficiency of circuit boards which employ the fiber glass cloth. Therefore, it would have been obvious to have optimized the spacing between the fibers as taught by JP 11-107,112. One of ordinary skill in the art would have been motivated to optimize the spacing between the fibers in order to enhance the efficiency of processes which employ the glass cloth, since JP 11-107,112 recognizes that the weave density is a result effective variable.

4. Applicant's arguments filed 1/16/03 have been fully considered but they are not persuasive. Applicant argues that JP '112 does not teach the claim fiber spacing in the woven sheet. However, while this is true, JP '112 does teach optimizing the weave density of the fabric in order

Art Unit: 1771

to reduce variation in molding time and dimension. Therefore, one of ordinary skill in the art would have been motivated to have optimized the weave density, and therefore, inherently, the spacing between the fibers, in order to enhance the efficiency of the processes which employ the glass cloth by reducing variations in molding time and dimension.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
